

## Describing a process

The flow chart shows the different stages from the discovery of oil to the sale of petrol. Summarize the process by describing the steps.

You should write at least 150 words.

Match the following stage with its description.

	Stage	Description
1.	<u>Topic sentence</u>	Subsequently, it is transported to petrol stations where it is stored in underground tanks.
2.	<u>Find crude oil</u>	<u>Then</u> , crude oil <b>is pumped</b> to these storage tanks and from there it <b>is sent</b> to refineries.
3.	<u>Drill oil wells</u>	<u>The next step</u> is refining the crude oil. In the refinery, it <b>is refined</b> to produce petrol and other petroleum products.
4.	<u>Lay down pipelines</u> to storage tanks	<u>The process begins</u> with prospecting for crude oil and locating sources where there are substantial amounts of crude oil underground.
5.	<u>Send crude oil</u> to refinery	The flow chart illustrates the process of production and sale of petrol. There are nine major steps in the process.
6.	<u>Refine oil</u> into petrol and other products	<u>When</u> the crude oil has been found, oil wells <b>are drilled</b> .
7.	<u>Divide petrol</u> into different types	Following this, the refined petrol is divided into different kinds
8.	<u>Transport petrol</u> to petrol stations	<u>To sum up</u> , this is how petrol is produced and sold.
9.	<u>Store petrol</u> in underground tanks	<u>After that</u> , pipelines <b>are laid down</b> connecting the oil wells to storage tanks.
10.	<u>Sell petrol</u> to vehicle owners	<u>Finally</u> , the petrol <b>is sold</b> to vehicle owners.
	<u>Concluding sentence</u>	<u>Finally</u> , the petrol is sold to vehicle owners.
