

## TECHNOLOGY - ROBOTS

### I. Read, drag and drop.

dangerous robots money machines temperatures dinner

- 1 At home we have a lot of machines. There are \_\_\_\_\_ which clean the floor, wash and dry our clothes and wash the plates. In the kitchen there are machines which can make our breakfast, lunch and \_\_\_\_\_ Some people call these machines kitchen robots, but what is a robot?
- 2 A robot is a machine which makes work easier for humans. They do jobs which humans can't do because they are very difficult or \_\_\_\_\_. Robots can explore places where humans can't go. They can go where there are dangerous gases or high \_\_\_\_\_ : \_\_\_\_\_ underground, \_\_\_\_\_ underwater or in space.
- 3 Robots are very important because they make, build and fix things. It's easier for \_\_\_\_\_ to work in factories because they can do the same job again and again and it isn't boring for them. Robots don't need \_\_\_\_\_ or \_\_\_\_\_ holidays. They are never ill or tired, but they can't think. Robots can only do what humans program them to do.
