

19. In the diagram below a person of mass 65 kg is standing on a platform over the piston of area $2.0 \times 10^{-2} \text{ m}^2$. What height of water, h will just support her? Assume that the density of water is 1000 kg m^{-3} .

20. From the figure below, find the buoyant force acting on the object.

$$F_B = W_1 - W_2$$

$$\text{Mass} = - \text{kg}$$

$$= \text{kg}$$

$$\therefore F_B = \text{X}$$

$$= \text{N}$$

21. The volume of a 0.75 kg sealed packet is $3.5 \times 10^{-4} \text{ m}^3$. If the density of water is 1000 kg m^{-3} ,

- Will the packet float or sink in water?
- Find the volume of the water displaced by this packet.
- Find the buoyant force
- Find the mass of water displaced by this packet.

$$M = \text{kg}$$

$$V = 3.5 \times 10^{-4} \text{ m}^3 @$$

$$= \text{m}^3$$

Answers

i) $\rho = -$

$$= \text{_____}$$

$$= \text{kg m}^{-3}$$

So the packet will \star

ii) $V_{\text{water}} = V_{\text{obj}}$

$$= \text{m}^3$$

iii) $F_B = \rho_w V_w g$

$$= \text{X} \quad \text{X}$$

$$= \text{N}$$

iv) $\rho = -$

$$m = \rho V$$

$$= \text{X}$$

$$= \text{kg} \star$$

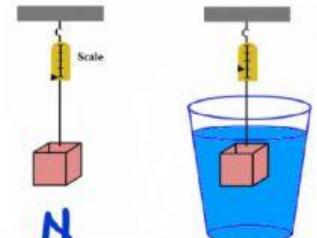

22. A stone weight 160N. When it is fully immersed in the liquid A, its apparent weight is 115N. Calculate the density of the liquid A if the volume of the liquid A displaced by the stone is 3640cm³.

$$\begin{aligned}
 W_1 &= N \\
 W_2 &= N \\
 V &= \frac{cm^3 \times m^3}{cm^3} \\
 &= m^3 \\
 F_B &= W_1 - W_2 = \rho v g \\
 - &= \rho \times \times \\
 &= \rho \times 0.0357084 \\
 \therefore \rho &= \frac{kg}{m^3}
 \end{aligned}$$

23. An object of mass 0.2kg sinks in cooking oil of density 0.92gcm⁻³. When the object fully immersed in the oil, it has an apparent weight of 0.94N. Calculate its density.

$$\begin{aligned}
 M &= \frac{kg}{m^3} \\
 W_1 &= \times \\
 &= \frac{N}{gcm^3} \\
 \rho_{oil} &= \frac{g}{cm^3} \\
 &= \times \frac{kg}{g} \times \frac{m^3}{cm^3} \\
 &= \frac{kg}{m^3} \\
 W_2 &= N \\
 F_B &= W_1 - W_2 \\
 &= - \\
 &= \\
 F_B &= \rho_{oil} \cdot V_{oil} \cdot g \\
 &= \times \times \\
 V_{oil} &= m^3 \\
 V_{obj} &= V_{oil} \\
 \rho_{obj} &= \frac{m}{V} = \frac{kg}{m^3} =
 \end{aligned}$$

24. Figure shows the weight of block W in the air is 6N. The block is immersed in a beaker of water and its weight becomes X N. Given that the density of block is $2 \times 10^3 \text{ kgm}^{-3}$. Find the value of X.

$$\begin{aligned}
 W_1 &= N \\
 W_2 &= X \\
 \rho_{block} &= 2 \times 10^3 \text{ kgm}^{-3} \\
 &= \frac{kg}{m^3} \\
 \rho_{water} &= \frac{kg}{m^3} \\
 V_{water} &= V_{block} \text{ (because the block fully immersed in water)} \\
 W_{block} &= mg \\
 &= m \times \\
 M_{block} &= \frac{kg}{m^3} \\
 V_{block} &= \frac{m^3}{m^3} \\
 F_B &= \rho_w V_w g \\
 &= \times \times \\
 &= N \\
 F_B &= W_1 - W_2 \\
 &= - \\
 \text{So } X &= - \\
 &= N
 \end{aligned}$$
