

- 1 All changes in climate and landmasses have been caused by humans.
- 2 Sea levels are rising because of thermal expansion and landmass loss.
- 3 About half of the rise in sea level is due to thermal expansion.
- 4 If the ice sheets melted, sea levels would rise more than 120 meters.
- 5 Glacier mass loss is responsible for 60 percent of the sea level rise.
- 6 Groundwater extraction contributes greatly to the subsidence problem.
- 7 Global climate change leads to more intense flooding.
