Review

In general a **property describes something** and **a change is actually happening, changes usually end with "ing"**.

A **physical property** can be detected with the 5 senses or measured.

A **physical change** is a change in a physical property, but does not change the identity of the substance, no new substance is created.

A **chemical property** describes how a substance will react.

A **chemical change** happens when the substance reacts with something else and makes a new substance, there is a change in identity.
