Exercise D: Read the text and choose the best answer and circle it. (5 points)

Cool animal families

Some animal families have a cool relationship with their relatives.

Elephants for example live in female groups. The group has six to twelve animals. The female elephant which is older than the others is the elephant that protects the sisters, babies and other relatives.

Orcas also live in groups. This group has the mother, her son and daughters. The mom looks after her children very well. Orca sons usually stay with their mom their whole life.

- | | | |
|--|------|-------|
| 1. Orca families have six to twelve animals | TRUE | FALSE |
| 2. The male elephants are also in the group. | TRUE | FALSE |
| 3. Orca sons protect the mom. | TRUE | FALSE |
| 4. Orca sons stay with their moms for many years | TRUE | FALSE |
| 5. Elephants and orcas have a special relationship with their relatives. | TRUE | FALSE |

In Summer 2018, a female Orca known as Tahlequah (J35) made national headlines when she traveled over 1,000 miles through the waters of the Pacific Northwest while dragging the lifeless body of her stillborn calf.

She refused to abandon her baby for 17 days.
