Environment:

1. **How can we protect our environment?**

We can protect the environment in many ways. We should …… waste selectively, we should use …….. things, shouldn't ……..water, we should use public transport instead …….using ……. We shouldn't drop litter. We should invest in renewable energy. We should switch off electric appliances at night. We should buy fair trade products, organic or local food and people should use reusable shopping bags.

2. **What is selective waste collection?**

This is a way of collecting rubbish. We …….. the waste depending ……. their material. And we put them in different containers.

3. **How many types of containers are there?**

If I am not mistaken, there are 4 types of containers.

4. **What are these containers used for?**

One is for collecting paper, one is for plastic and metal, the third one is for colourful glass, the forth one is for white glass.

5. **What can young people do to protect our environment?**

They have to be more ……about the environment. Young people should reuse almost everything, and …… buy unnecessary things. Young people can use electric cars, turn ……the tap when they don't use it, can use public transport, do voluntary work in connection with environment protection.

6. **How can we keep our parks, streets clean?**

First of all, we shouldn't drop litter, or throw away anything. Maybe there should be more bins in the parks. We can just pick up other people's litter. We can do voluntary work in parks.

7. **How do some people pollute the environment?**

People can cause air pollution, noise pollution, water pollution, soil contamination. These can happen due to increasing population, exhaust fume made by factories or vehicles. But people pollute the environment with so little things they don't even realise it. So there are several ways in which people can pollute the environment for example:

- we use aerosol deodorant and bottled water. (plastic bottle takes 500 years to break down)
- we throw …….. gum on the ground. Birds can eat it.
- we eat food containing palm oil
- we leave …… butts on the beach
- we release helium balloons in the air.
