a. If there is a range of temperatures	c. If it doesn't rain for two weeks
b. If it is too hot for two weeks	d. If the streets are full of water

C. Read the text and circle TRUE or FALSE

Tornadoes happen in many countries on Earth and the USA is one of them. Tornadoes can become very dangerous because they have high wind speeds and can destroy trees or houses.

They form when warm air and cold air come together. The warm air moves up and the cold air moves down. In this way they make a twisting wind of air that moves in circles. The twisting air stands up and then takes the shape of a funnel. When the funnel touches the ground, it becomes a tornado. Special instruments measure the tornado. Computers show where the wind was the strongest. If you see a tornado, you should find shelter to stay safe!

1. Tornadoes happen all over the world.	True	False
2. The funnel becomes a tornado when the twisting air stands up.	True	False
3. Computers can show the speed of the wind.	True	False
4. Tornadoes are not very dangerous because the twisting winds are only in the air.	True	False
5. If you see a tornado, go out of the shelter.	True	False

NAME: _____

DATE: _____ CLASS _____
