a Probably not.
b That's nice.

Reading

2 Read the text and mark the sentences T (true) or F (false).

Time for the Future

The future of technology is not about building bigger and more powerful machines. It's about making machines which are smaller, more intelligent and easier to use. Machines just like the Apple Watch.

The Apple Watch is an incredible gadget. It looks like and is about the same size as a normal digital watch. But it does a lot more than just give you the time of day. For one thing, it has everything a smartphone has. There is a music player. You can send and receive calls and messages. You can even pay for things with it instead of your bank card.

But what makes the Apple Watch better than a smartphone? For health and fitness fans, it is able to measure your heart rate while you exercise. It can also help around the house. It can open your front door or turn on the TV and change channels. It can even control the heating in your house to give you a really warm welcome. So leave your smartphone at home because the Apple Watch is a step forward for technology. A move into a world where we don't just use technology, we wear it!

The Apple Watch

- 1 is bigger than a normal digital watch.
- 2 does fewer things than a smartphone.
- 3 can play your favourite songs.
- 4 makes your life easier when shopping.
- 5 gives you advice about your diet.
- 6 helps you operate your TV.
