

INTERNEURON

when you touch a hot surface with your fingertips, the sensory neurons will be the ones firing and sending off signals to the rest of the nervous system about the information they have received.

ASTROCYTE

They directly control all of our muscle movements.

MOTOR NEURON They transfer signals between sensory and motor neurons, they can also communicate with each other, forming circuits of various complexity.

They repair the human brain

MICROGLIA

SENSORY NEURON They can help delay the progression of diseases in the brain like <u>Alzheimer</u>.
