

Name: _____

Listening Comprehension
PASSAGE: TEXT FEATURES
TOTAL MARKS: 10

Listen to the passage as it is read twice. Answer the questions which follow using your prior knowledge and information from the passage.

1. Why do authors include text features in a book?

2. Choose **SIX** text features.

3. Which text feature tells the definition of some of the words found in a text?

4. Which text feature tells what pages the reader can find certain topics?

5. Which text feature tells what the text will be about?

the 1990s, the number of people with diabetes has increased in all industrialized countries, and this increase is continuing to rise.

Diabetes is a chronic disease, and the consequences of the disease are often severe. The most common complications of diabetes are cardiovascular disease, kidney disease, eye disease, and nerve damage. These complications can lead to disability and even death. Therefore, it is important to have good control of blood sugar levels to prevent or delay the onset of these complications.

There are two main types of diabetes: type 1 and type 2. Type 1 diabetes is an autoimmune disease in which the body's immune system attacks and destroys the insulin-producing cells in the pancreas.

Type 2 diabetes is a metabolic disease in which the body's cells become resistant to the action of insulin. This resistance is often caused by a combination of genetic and environmental factors, such as obesity and a sedentary lifestyle. Type 2 diabetes is the most common form of diabetes, and it is often diagnosed in middle-aged and older adults.

Diabetes is a complex disease, and its management requires a combination of medical, lifestyle, and psychological interventions. This paper will discuss the current state of research on the psychological aspects of diabetes management.

The first section of the paper will discuss the psychological impact of diabetes. This section will focus on the emotional and cognitive consequences of the disease, as well as the role of social support in coping with the disease.

The second section of the paper will discuss the role of psychological interventions in diabetes management. This section will focus on the effectiveness of various psychological interventions, such as cognitive-behavioral therapy and self-management education.

The third section of the paper will discuss the role of psychological interventions in preventing or delaying the onset of diabetes complications. This section will focus on the effectiveness of various psychological interventions, such as stress management and lifestyle modification.

The fourth section of the paper will discuss the role of psychological interventions in improving the quality of life of people with diabetes. This section will focus on the effectiveness of various psychological interventions, such as support groups and counseling.

The fifth section of the paper will discuss the role of psychological interventions in promoting adherence to medical treatment. This section will focus on the effectiveness of various psychological interventions, such as behavior modification and self-monitoring.

The sixth section of the paper will discuss the role of psychological interventions in promoting self-management of diabetes. This section will focus on the effectiveness of various psychological interventions, such as self-management education and decision-making training.

The seventh section of the paper will discuss the role of psychological interventions in promoting the use of technology in diabetes management. This section will focus on the effectiveness of various psychological interventions, such as computer-aided decision-making and mobile health applications.

The eighth section of the paper will discuss the role of psychological interventions in promoting the use of telemedicine in diabetes management. This section will focus on the effectiveness of various psychological interventions, such as remote monitoring and virtual reality training.

The ninth section of the paper will discuss the role of psychological interventions in promoting the use of artificial intelligence in diabetes management. This section will focus on the effectiveness of various psychological interventions, such as decision support systems and predictive modeling.

The tenth section of the paper will discuss the role of psychological interventions in promoting the use of robotics in diabetes management. This section will focus on the effectiveness of various psychological interventions, such as prosthetic limbs and exoskeletons.

The eleventh section of the paper will discuss the role of psychological interventions in promoting the use of nanotechnology in diabetes management. This section will focus on the effectiveness of various psychological interventions, such as drug delivery systems and biosensors.

The twelfth section of the paper will discuss the role of psychological interventions in promoting the use of quantum computing in diabetes management. This section will focus on the effectiveness of various psychological interventions, such as optimization algorithms and data analysis.

The thirteenth section of the paper will discuss the role of psychological interventions in promoting the use of blockchain technology in diabetes management. This section will focus on the effectiveness of various psychological interventions, such as secure data storage and decentralized decision-making.

The fourteenth section of the paper will discuss the role of psychological interventions in promoting the use of virtual reality in diabetes management. This section will focus on the effectiveness of various psychological interventions, such as immersive training and virtual support groups.

The fifteenth section of the paper will discuss the role of psychological interventions in promoting the use of augmented reality in diabetes management. This section will focus on the effectiveness of various psychological interventions, such as interactive training and virtual assistance.

The sixteenth section of the paper will discuss the role of psychological interventions in promoting the use of mixed reality in diabetes management. This section will focus on the effectiveness of various psychological interventions, such as blended training and virtual collaboration.

The seventeenth section of the paper will discuss the role of psychological interventions in promoting the use of haptic technology in diabetes management. This section will focus on the effectiveness of various psychological interventions, such as tactile feedback and vibration alerts.

The eighteenth section of the paper will discuss the role of psychological interventions in promoting the use of voice technology in diabetes management. This section will focus on the effectiveness of various psychological interventions, such as voice-activated devices and voice-activated assistants.

The nineteenth section of the paper will discuss the role of psychological interventions in promoting the use of gesture technology in diabetes management. This section will focus on the effectiveness of various psychological interventions, such as hand-tracking and gesture-based control.

The twentieth section of the paper will discuss the role of psychological interventions in promoting the use of eye-tracking technology in diabetes management. This section will focus on the effectiveness of various psychological interventions, such as gaze-based navigation and eye-tracking analysis.
