Scientists have done a lot of (1) on people's eating habits. They have statistics, or (2), to prove that there is a (3) or link between good food and good health. People who (4) fast food at every meal are likely to have more health problems than those who eat at home. Fast-food eaters are also likely to miss out on some of the (5) effects of eating fresh fruit and vegetables. A (6) conducted by scientists shows that teens are (7) in their preference for fast food. They may not (8) the benefits of a well-balanced diet.
