Turning-in

Task1

1.Who are the users? Doctors and Reseptionist, Practice manager

2. What kind of hardware is used? Doctor A- PC, DoctorB-PC, Practice manager – PC(Finance). Doctor C- PC, Reseptionist –server,laser printer,dot-matrix printer.

3.What do the doctors use it for? Doctors uses to view a recording

4. What do the receptionist use it for? Reseptionist uses for registration

5. What does the practice manager use it for? Practice manager uses for practical work

Task 3

1. A network is simply two or more computers linked together.
2. Printers and other computer resources are components of the network.
3. Local Area Networks or LAN's means that computers are linked within a limited area – within a department, an office or building. Wide Area Networks or WANs stands for networks which can share information with someone on the other side of the world as easily as sharing with a person at the next desk.
4. Networks increase productivity by allowing workers to share information easily without printing, coping, telephoning or posting. They also save money by sharing peripherals such as printers.

Task 5

1) LANs and WANs
2) Laptop
3) USB
4) HDMI

Task 6

a)-mesh

b) star

c) bus

d) ring

Task 8

1) The bus Network Topology
2) Open the Start Menu and then Control Panel.

3)In networks with ring topology, computers are connected to each other in a circular format.

4)A star topology is a topology where every node in the network is connected to one central switch

5)A bus topology is the most lightweight in terms of cable needs. In this sense, this would be the simplest topology to install and buy cables for.

Task 9

1-g

2-j

3-f

4-a

5-e

6-d

7-c

8-b

9-i

10-h

Task 10

1)..will be Windows close

2) If you finished work, you will close dowb windows programs

3) If you infut the wrong password then no way out

4) If not working usb cabel printer, you printer will not print

5) If your monitor is too bright, press the brightness button and set the mode to lower brightness
