

Science – Grade 5

## The Scientific Method

Teacher: Sahar Ghanem

1- Order the steps of the scientific method. (Drag the correct number and drop it in the right place).

1 2 3 4 5

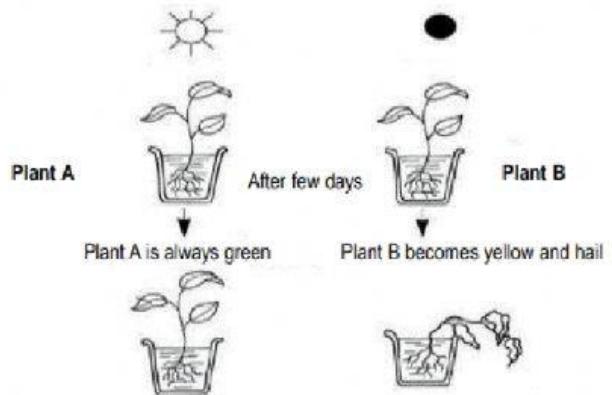

Hypothesis      Experiment      Problem      Conclusion      Result

2- Check if each statement is true or false.

Statement	✓	✗
The result is what we learned from the experiment		
There should only be 1 variable factor in an experiment		
The hypothesis is the question asked before the experiment		
The experiment is done to test the hypothesis		

3- Does a green plant need light to grow up normally?

To answer this question, we bring 2 identical green plants. After few days, Plant A is always green while plant B becomes yellow and hail.

a- The posed problem is:

b- The hypothesis is:

c- The variable factor is:

d- The result is:

e- The conclusion is:
