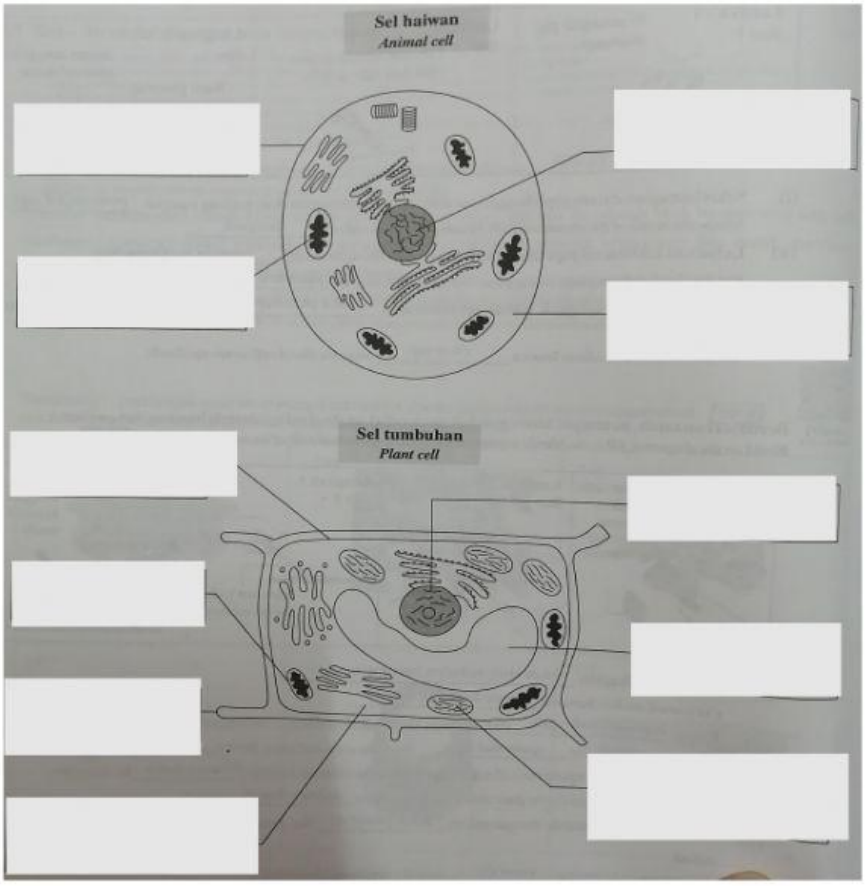
Name the structures of animal cell and plant cell in the following diagram.



State the correct function of the following structure of cell.

Cell structure	Function
Cell wall	Provide support, protection and _____ to the cell.
Cell membrane	Controls the movement of materials _____ and _____ of the cell.
Vacuole	Provide support to the cell when filled with _____.
Mitochondria	Provides _____ for chemical reaction.
Cytoplasm	Place where _____ occur.
Chloroplast	Contains _____ pigment which absorbs light for _____.
Nucleus	Controls all the _____ of the cell and contains chromosomes that are made up of deoxyribonucleic acid which store genetic information.
