

Thermosoftening and thermosetting polymers (<https://youtu.be/lmYCDMWBqRo>)

1. Drag and drop the terms to their correct location in the diagram.

weak melt chains crosslinks chains intermolecular forces not melt strong reshaped crosslinks

2. Match the terms with the definitions.

weak
melt
crosslinks
intermolecular forces
strong
reshape

Powerful; having or using great force or control.
To shape something again or differently
Not physically strong.
It is a bond that links one polymer chain to another.
To turn from something solid into something soft or liquid
Forces that exist between molecules.
