

Carbon & Its Compounds

Class-VII

WS-4

By: M.A.Shamsi

Drag the correct option to the correct blank:

Covalent	2-Dimentional
Diamond	Carbon
Three	Graphite
Van der waal's force	Silicon carbide
3-Dimentional	Four

This exercise is based on properties of diamond & graphite:

1. _____ allotrope of carbon is one of the hardest naturally occurring substance.
2. _____ allotrope of carbon is naturally found as plumbago.
3. Diamond has a _____ structure.
4. In Graphite each carbon is bonded to _____ other carbon by covalent bond.
5. Graphite has a _____ structure.
6. In Diamond each carbon is bonded to _____ other carbon by covalent bond.
7. Graphite can be artificially prepared by heating _____
8. Diamond can be artificially prepared by heating _____ under high temperature & pressure
9. Graphite is soft because of flat layers joined together by _____
10. Diamond is hard because of carbon atom joined together by _____
