Aquatic Animals

Fishes can breathe underwater. Aquatic animals live in the water: sea, rivers, lagoons, etc. Most sharks in the ocean can't stop moving, because if they do, they can't breathe. Sharks grow new teeth every eight days!

Octopuses like to stay in the warm parts of the ocean.

Some octopuses can squeeze fishes with their long tentacles and even kill them with a poison bite. They can be dangerous! Octopuses can change their color any time and squirt black ink if they want to hide from an enemy.

Whales are the biggest mammals on Earth. If you cut an arm of a starfish, it will regenerate! It means that the arm will grow back. A dolphin is a very intelligent creature. They have the best memory in the whole animal kingdom!

Read the text ans answer the questions in Portuguese:

Por que a maioria dos tubarões não podem parar de se mover?

_____

O que alguns polvos coseguem fazer?

_____

O que o texto diz sobre estrelas-do-mar?

_____

O que o texto diz sobre golfinhos e baleias?

_____

_____
