Digestive system

When we eat food, the digestive system breaks it down into nutrients that the body needs.

1. Label the picture.

mouth stomach oesophagus small intestine anus large intestine

2. Order the process of digestion.

\bigcirc	The stomach breaks the food down into nutrients.
\bigcirc	The oesophagus pushes the food down to the stomach.
\bigcirc	We chew the food with our teeth.
\bigcirc	The large intestine takes waste to the anus.
\bigcirc	The waste goes through the anus .
\bigcirc	The small intestine separates the nutrients from the waste and absorbs the nutrients . The nutrients pass from the small intestine into the blood, which carries them to all parts of the body

3. Which is the longest intestine? Choose the correct option.

- a) large intestine
- b) small intestine
