

Underline the correct answer.

- 1 The (volume/mass) of an object is the amount of space it takes up.
- 2 The volume of a liquid can be measured using a (measuring cylinder/balance scale).
- 3 Mass can be measured in (kilograms/litres).
- 4 We can measure the volume of a solid by measuring the volume of (liquid/gas) that it displaced.
- 5 The (volume/mass) of a gas is the same as that of the container that it is in.

Go To WB Exercise 3

Fill in the blanks with the correct words.

- 1 \_\_\_\_\_ is anything that has mass and takes up space.
- 2 All matter is made up of \_\_\_\_\_ that we cannot see.
- 3 A liquid has a fixed \_\_\_\_\_, but not a fixed \_\_\_\_\_.
- 4 The \_\_\_\_\_ of an object can be measured using a balance scale.
- 5 We can use a measuring cylinder to measure the \_\_\_\_\_ of a liquid.
