

THE WATER CYCLE

Name: _____

Section: _____

1. Drag and drop the words on the correct places to label the Water Cycle:

RUNOFF

PRECIPITATION

CONDENSATION

EVAPORATION

2. Read the text and then answer the questions.

Precipitation comes down from the clouds in the form of rain or snow. Water collects on the ground. Water then goes up into the sky as water vapor. You can't see water vapor. The water vapor then turns into liquid water during condensation. Condensation forms clouds. Then the whole process starts again!

a) Can you see water vapor?

b) What forms clouds?

3. Look at the picture and choose true or false:

- ❖ Precipitation can be rain or snow.
- ❖ Evaporation is when the water of the seas, oceans and lakes turns into vapor and forms a cloud.
- ❖ Precipitation only happens on the sea.
- ❖ The water in the clouds is in gas state.
- ❖ Evaporation happens when the liquid water gets cold.
- ❖ Precipitation happens when the water in the clouds gets cold.

3. Do you think the sun is necessary in the water cycle? Why?
