Name:

1. Factorise the following:

$x^2 - 9 = ($ $+$ $) ($ $-$ $)$

$4y^2 + y = $ $($ $)$

$6nx - 9mx - 4ny + 6my = (3x$ $) (2n$ $)$

$2y^2 - 5y + 2 = (2y$ $) (y$ $)$

$5x^2 - 20 = $ $($ $+$ $) ($ $-$ $)$

2. Expand and simplify:

$(2x - 3)(x - 2) = $ x $-$ x
