

Complete the Cell Cycles Checkpoints

Match the following

DNA damage is replicated

It monitors for damage in replicated DNA

Monitors for attachment of chromosomes to spindle fibers

Monitors problem with DNA replication

Regulates cell cycle

Two internal factors of cell cycle

CDK is destroyed

Arrange the CDK activity in correct order.

Write the correct order here.

1. The cyclin/CDK complex activates a cellular protein.
2. The cyclin protein is destroyed.
3. Cyclin activates the cyclin-dependent kinase.
4. A phosphate group binds to the cyclin-dependent kinase.

Drag and drop the terms that correctly complete the sentences.

1. During , the attachment of sister chromatids to spindle fibers is checked.
2. During , the possibility of DNA damage is checked.
3. During the S phase checkpoint, any problem is monitored.

C stage checkpoint

DNA replication

G_1 stage checkpoint

M stage checkpoint

S stage checkpoint
