

Decompose one factor.

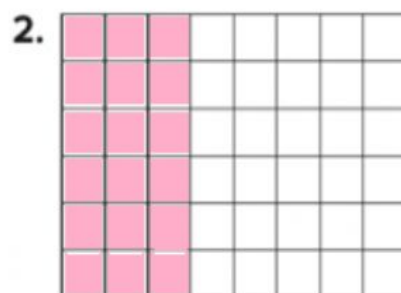

Then find the product for each part and add.

$$7 \times 7 = (7 \times \underline{\quad}) + (7 \times \underline{\quad})$$

$$= \underline{\quad} + \underline{\quad}$$

$$= \underline{\quad}$$

$$6 \times 8 = (6 \times \underline{\quad}) + (6 \times \underline{\quad})$$

$$= \underline{\quad} + \underline{\quad}$$

$$= \underline{\quad}$$
