

AMPHIBIAN CHARACTERISTICS

Nutrition

Most amphibians are

Reproduction

Amphibians are

Respiration

Baby amphibians live in water and breathe through their , like fish do.

Adult amphibians breathe with their and through their **moist skin**.

The word *amphibian* means *two lives*: one in the water and one on land.

Physical characteristics

Unlike reptiles, amphibians do not have scales. They have which absorbs oxygen.

What must a frog develop before it can live on land?
