#### INSECT HOTELS

What is an insect hotel? It may sound strange, but scientists say that these small wooden 'houses' are an excellent way to help the insects that are essential for our gardens. In fact, the life of insects is really (1) \_\_\_\_ . If you watch ants, for example, closely, you will see how they work as a group in order to find the best way to help their colony survive. OK, so some people would probably get (2) \_\_\_\_ watching small insects, but if you look for information about them on the Internet first, you will probably find it more (3) \_\_\_\_ . Ants are a good example of how big groups of insects can work together. Bees also live in huge colonies and are very efficient workers. This miniature world may not be as (4) \_\_\_\_ as watching large animals, but it can still be very interesting. So why not try building an insect hotel in your garden?
