

TIGERS VS MONKEYS

Next summer I'm going on a trip to India with my family. We are going to visit lots of monuments, places and markets. But the most interesting part is that we are going to some Natural National Parks in the jungle. In these parks there are many wild animals, but my two favourite ones are tigers and monkeys.

Both tigers and monkeys live in the jungle.

Tigers are called "big cats", and they are powerful carnivores. They are very dangerous and eat other animals. Tigers can live up to 20 years in zoos, but only 14 years in the wild. They can run up to 56 kilometres per hour. Tigers are not as good as monkeys climbing trees but they are great swimmers!

Length.....270cm
 Top speed.....56km/h
 Age.....14 years
 Habitat.....jungle
 Food.....meat

v

....swim, run, climb

x

....fly, vegetables

Length.....270cm

 Age.....14 years
 Habitat.....jungle
 Food.....meat

v

....climb, play, jump

x

....swim

Monkeys are smaller animals and they eat vegetables such as fruit, flowers and leaves. They are quite fast too, but not faster than tigers. Monkeys can live many years, up to 35 in the jungle. Most of the time monkeys play and jump from tree to tree. Sometimes they even play with humans! Monkeys are similar to us: they live in big groups of different families, and live together in the same area.

And their favourite food is bananas... mine too!

1. Where can they see lots of animals in India? _____
2. How long can tigers live in the jungle? _____
3. Both tigers and monkeys are good at _____
4. The fastest runner is _____
5. _____ are herbivores, they eat _____.
6. Why are tigers dangerous? Because _____
7. Which animal can swim very well? _____
8. I think monkeys are friendly because _____
9. What's is the boy's favourite food? _____
