What are the chances a robot or computer will one day _____ your job?
According to one study, 47 percent of US jobs have a high probability of becoming computerized. And recently, the Pew Research Center surveyed 1,900 experts who all agreed that automation and _____ intelligence will truly _____ our lives by 2025. But nearly half of the experts aren't optimistic about this automation at all. They say, robots and other tech will _____ blue and white collar workers. Masses of people will be effectively _____. Still, you have the other half of experts saying: «Yes, robots will do lots of work, but humans will _____ to find new types of employment, just as they did after the Industrial Revolution automated many jobs». So what's it like out there right now? Two economists _____ with the list of jobs according to how likely they could be automated. Among the top 15 jobs were things like _____, bank tellers, secretaries, and _____. Almost all of these positions are already in decline in the US workforce. but what about those jobs with the lowest likelihood for automation? Well, these were things like athletes, _____, teachers and curators. So how should people prepare for the day when robots really take over? Well, maybe _____ your kids master the pitch instead of the keyboard.
