

REPASO NATURAL SCIENCE UNIT 4

1. Rellena los huecos que falten.

- Our digestive System breaks food into small particles called.....
- Our muscles and organs need these nutrients to give us and help us
- The removes excess water and other waste products from our body

2. Escribe como se llaman los distintos órganos que forman parte del proceso digestivo.

3. Escribe a qué órgano pertenece cada función

- Here, food is broken up by the teeth and mixed with saliva by the tongue

- There are lots of blood vessels nutrients pass into the blood here.

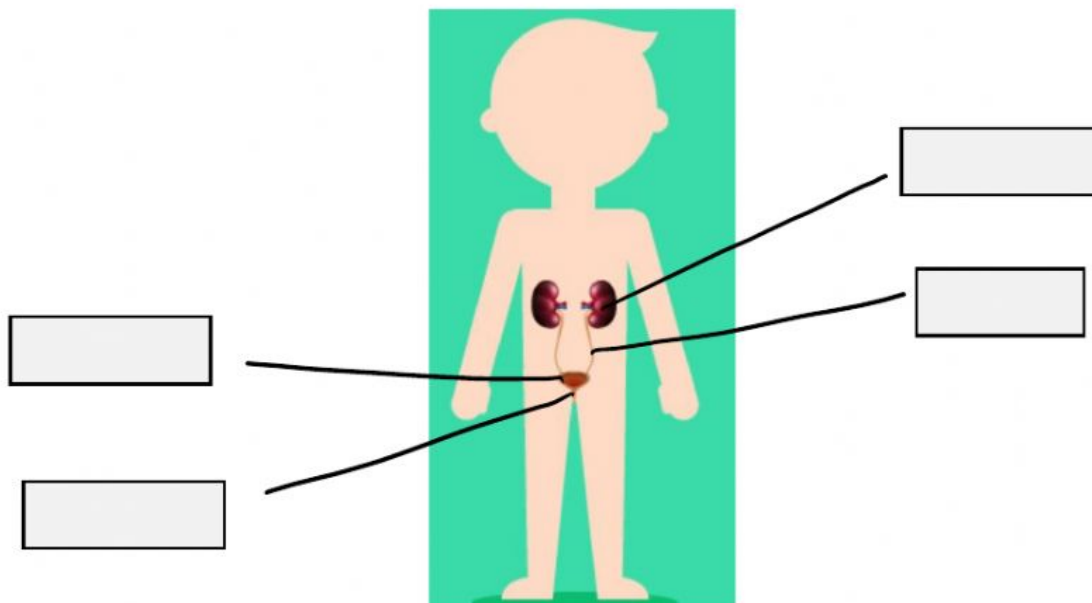

- The waste, called faeces, leaves the body here.

- Food goes down this tube to the stomach

- The waste passes through here. Water goes out into the body and the waste becomes harder.

- Here, gastric juices make the food into a thick liquid.

4. Señala las partes del Sistema excretor.

5. Escribe a qué órgano pertenece cada función

- The urine goes down these tubes to the bladder

- The urine leaves the body through this tube

- When the blood goes through here, excess water and waste products are dropped off and made into urine.

- The urine is stored here. When it's full it sends a message to our brain.
