Expert systems

Machine learning

Natural language processing (NLP)

Robotics

Computer vision

a model used in deep learning that attempts to simulate the function of the brain's neurons.

computer programs designed to solve complex problems as a human expert would.

the ability to learn, reason, solve problems, and adapt to new situations.

the ability of machines to understand, interpret, and produce human language.

the branch of technology that deals with the design, construction, and operation of robots.

- self-operating machines that perform simple tasks without external control.

the ability of machines to interpret and understand visual data from the world around them.

a model used in deep learning that attempts to simulate the function of the brain's neurons.

a measure of a machine's ability to exhibit intelligent behavior equivalent to, or indistinguishable from, that of a human.

a subset of AI that involves training algorithms to learn from and make predictions on data.
