### IV/ READ THE PASSAGE AND CHOOSE THE BEST ANSWERS TO THE QUESTIONS. (20 PTS)

Jupiter is the largest and most massive planet and is fifth in order of distance from the sun. It is well placed for observation for several months in every year and on average is the brightest of the planets apart from Venus, though for relatively brief periods Mars may outshine it. Jupiter's less than 10-hour rotation period gives it the shortest day in the solar system insofar as the principal planets are concerned. There are no true seasons on Jupiter because the axial inclination to the perpendicular of the orbital plane is only just over 3°- less than that for any other planet.

The most famous mark on Jupiter is the Great Red Spot. It has shown variations in both **intensity** and color, and at times it has been invisible, but it always returns after a few years. At its greatest extent it may be 40,000 kilometers long and 14,000 kilometers wide, so its surface area is greater than that of Earth. Though the latitude of the Red Spot varies little, it drifts about in longitude. Over the past century, the total longitudinal drift has amounted to approximately 1200°. The latitude is generally very close to -22°. It was once thought that the Red Spot might be a solid or semisolid body floating in Jupiter's outer gas. However, the Pioneer and Voyager results have **refuted** that idea and proven the Red Spot to be a phenomenon of Jovian meteorology. Its longevity may well be due to its exceptional size, but there are signs that it is decreasing in size, and it may not be permanent. Several smaller red spots have been seen occasionally but have not lasted.

66. What is the main idea of the passage?

A. How long Jupiter lasts      B. The comparison between Jupiter and other planets  
 C. Life on Jupiter      D. Some features about Jupiter

67. According to the passage, Jupiter has the shortest day among the principal planets because

A. its rotation period is shorter than 10 hours      B. the axial inclination is only just over 3°  
 C. it is on the average the brightest of all the planets      D. there is the interference of the Great Red Spot

68. According to the passage, Mars outshines Jupiter

A. on a regular basis      B. from time to time  
 C. every several months      D. less often than any other planet

69. The author's tone in the passage is

A. argumentative      B. supportive      C. enthusiastic      D. neutral

70. The passage would be of most interest to

A. students of anthropology      B. geologists      C. mathematicians      D. amateur astronomers

71. It can be inferred from the passage that Jupiter's Great Red Spot

A. will become brighter with time      B. will one day disappear  
 C. will continue expanding      D. is made of floating gases

A. visibility      B. density      C. brilliance      D. surface area

74. What does the word 'refuted' in line 11 mean?
