| governmental spending | persist (v) |
| implement (v) | punctuality (n) |
| individual vehicle | sustainable - unsustainable (adj) - sustainably (adv) |
| interrupt (v) | tackle (v) |
| intersection (n) | traffic congestion (collocation) |
| means of transport (np) | traffic intensity (np) |

*Some people believe the government should spend money on building train and subway lines to reduce traffic congestion. Others think that building more and wider roads is the better way to reduce traffic congestion. Discuss both views and give your opinion.*

The methods of 1_____traffic congestion have become a heated topic of controversy. Some people argue that the construction of larger roads is the answer to the problem. However, I contend that such a solution is 2_____in the long term, while the option to construct railways and subways is a far better 3_____.

There is a common fallacy that 4_____on building larger roads could 5 _____address the problem of traffic congestion. An increase in road size could reduce the 6_____in the short term, but larger roads also mean that citizens are encouraged to purchase more 7_____. This leads to the fact that the roads, 8_____larger, would soon be filled with intense traffic again. For instance, traffic jams returned to Shanghai's main streets not long after they were expanded in the early

1990s. In brief, if this solution were 9_____, traffic jams would still 10_____ in the long run.

Rail and subway systems, however, could ensure that 11_____ is 12_____. Unlike cars and buses, trains are capable of transporting hundreds of people simultaneously and thus would 13_____ of a vast number of passengers. Moreover, trains do not have to gothrough 14_____ or traffic lights, and 15_____ ensure their travel is hardly 16_____. In other words, trains are always on time regardless of the level of traffic. This standard of 17_____ would encourage many people to choose railways and subways as their primary 18_____, and the number of individual vehicles would decreaseaccordingly. As a result, traffic congestion could be 19_____.

In conclusion, building more and larger roads is an 20_____measure, while train and subway lines would be a much more effective solution for the problem of traffic congestion.
