2. Honey is sugar which mainly constitutes of
3. Honeybees live in a large group called \_\_\_\_\_ which lives in
4. A colony has thousands of \_\_\_\_\_ who make the honey.
5. The worker bees are also known as
6. Once the worker honeybee returns to the hive they \_\_\_\_\_ the nectar into a processor honeybees mouth.
7. Then the bee moves this watery honey mix and store it into
8. This new nectar mix is still watery and
9. To get rid of most of the water the smart bees \_\_\_\_\_ their wings.
10. The single bee only produces about \_\_\_\_\_ of honey in its whole life.

## 3. PUT THE SENTENCES IN THE CORRECT ORDER

Once the worker honeybee returns to the  
hive it vomits the nectar into a  
processor honeybees' mouth.

1

Honeybees suck up the nectar with the  
help of the hollow straw-like tongue  
from the flowers and store it into  
their tummies.

2

The bee moves this watery honey  
mix and stores it into the honeycomb.

3

Dr. Binocs is carrying a small  
box with a bottle of honey inside.

4

First the worker bees visit  
flowers containing sugar water.

5

While returning to their beehive,  
digestive enzymes are already processing  
to turn that nectar into different parts of sugar.
