Task Management

1) listen and choose the correct option

Google is a business. It **has/as** one project, which is Google Maps. Your **team/tin** belongs **two/to** one product of Google Maps. Let us **assume/assign** that you calculate **ETA/ETE** . In this **team/tin** , you, the **young/yan** software **leader/engineer** , has been assigned to find **traffic/graphic** jams and this will help you **set/send** the **ETA/ETE** the right way. And you, an individual **leader/engineer** are **doing/going** to be looking at **one/want** small component of that **project/object** . Okay, this is usually how **tins/things** work in a large **company/commandry** . In a small company or a **startup/starstruck** , what happens is, you **are/aren't** part of a **team/tin** again, but the **tin/team** is **walking/working** on the entire product, the **startup/starstruck** usually has just one product.

2) listen - drag and drop the words to put them in the order you hear them

tools | Phabricator | discuss | popular | first | software | Google Doc | tomorrow

organizations | task management | route | note | idea | JIRA | traffic jams
