The purpose of this third expert group meeting on the cultural contexts of health (CCH), co-organized with UNESCO on 13-14 March at UNESCO's headquarters in Paris will be two-fold. The first day will be dedicated to reviewing and inputting on the various papers researching on the reasons explaining why customs and traditions help on the creation of a community identity and the cultural bonds which positively influence on the mental health and general wellness. On day two, the meeting will shift towards recommending new strategies and actions for rescuing, protecting, and maintaining the cultural heritage and background represented and transmitted by customs and traditions, with a particular focus on research methodologies and concrete research outputs.	
Following two initial expert meetings held at WHO Regional Office for Europe in Copenhagen (Denmark) in 2021 and 2022, UNESCO hosted the third expert group meeting from 13 to 14 March 2023 at UNESCO Headquarters in Paris. The meeting gathered 29 experts from the health-related humanities and social sciences, as well as experts from public health, WHO and UNESCO, to reflect on the intersection of culture, health and well-being. Discussions revolved around ways to enhance public health policy-making taking into consideration participative methods, such as community based inventorying for health related knowledge and practices, etc.	
"It is clear that the respect for traditions is an important factor to guarantee the sense of belonging and community nurturing that influences on the mood and well-being of people", said Dr. Tedros Adhanom Ghebreyesus, WHO Director-General.	
WHO and UNESCO experts explore the linkages between culture, health and well-being By Mariano Calderón, Staff Reporter	
This series of expert group meetings is part of a wider initiative launched by WHO in response to a call by the Member States in Europe for more locally grounded and culturally sensitive approaches to health. The project seeks to build a platform for research and information sharing, to support the implementation of Health 2025, the European policy framework for health and well-being.	
PARIS.- The 2023 Convention's new Operational Directives related to sustainable development encourage States Parties to safeguard health practices recognized by communities as living heritage and harness their potential to achieve quality health care for all. In parallel, a growing number of voices in the public health community have been calling for the need to reconsider the important role that culture plays in the provisioning of equitable health care. Most notably, in 2014, the Lancet Commission argued that the systematic neglect of culture is the single biggest barrier to advancing the highest attainable standard of health worldwide.	
Director-General of UNESCO since 2017, Audrey Azoulay, one of the most enthusiastic speakers in this meeting finally stated: "We believe that events like this will set the appropriate path to recognize the importance of traditions to ensure an equitable healthcare".
