

1.

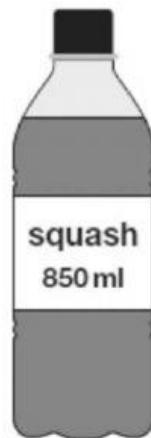

$$2.12 \div 10 =$$

2.

$$\frac{4}{9} + \frac{2}{3} =$$

This 850 ml bottle of squash makes 17 drinks.

3.

How many millilitres of squash are in each drink?

Write your answer in the box below.

A simple black rectangular outline representing a box for writing an answer.

4.

You can make green paint by mixing:

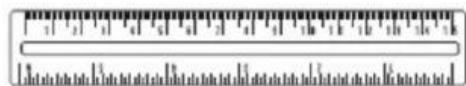

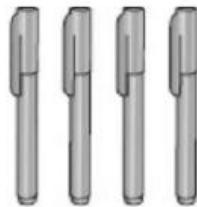

- 250 ml of blue paint
- 1,150 ml of yellow paint.

Stefan wants to make some of this green paint.

He uses 750 ml of **blue** paint.

How much **green** paint does he make?

5. Adam buys 4 pens and a ruler and pays £4.75 altogether.

Jack buys 2 pens and pays £1.98 altogether.

How much does a **ruler** cost?

6.

Ally chooses a whole number.

When she multiplies her number by 4, the answer is **less than 100**

When she multiplies her number by 5, the answer is **greater than 100**

Write a number that Ally could have started with.

Write your answer in the box below.

7.

Write the missing fraction to make this **addition** correct.

$$\frac{2}{3} + \boxed{\phantom{00}} = \frac{5}{6}$$

8.

The **full price** of a T-shirt is £15

The price is reduced by 30%.

What is the **reduced price**?

Write your answer in the box below.

A theme park sells tickets online.

9.

Each ticket costs £24

There is a £3 charge for buying tickets.

Which of these shows how to calculate the total cost, in pounds?

**Tick one.**

number of tickets  $\times$  3 + 24

number of tickets  $\times$  24 + 3

number of tickets + 3  $\times$  24

number of tickets + 24  $\times$  3

Drag and drop the tick to the correct calculation
