$$1. \quad \frac{3x-5}{8} - 1 = 20$$

$$\frac{3x-5}{8} = 20 + \dots \dots \dots$$

$$3x-5 = 21 \times \dots \dots \dots$$

$$x = \frac{168 + \dots \dots \dots}{\dots \dots \dots}$$

$$2. \quad 2x-3 = 5x-21$$

$$2x \dots \dots \dots = \dots \dots \dots \dots \dots$$

$$\dots \dots \dots = \dots \dots \dots$$

$$\dots \dots \dots = \dots \dots \dots$$
