

**Activities**

- 1- Traducir el párrafo**
- 2- Escribir las palabras transparentes/cognados y palabras técnicas donde corresponda.**

Technology is dynamic; it keeps on improving because our needs and demands for technology keep on changing. We have moved from the industrial age (industrial revolution), in Great Britain to an information age. During the industrial age, companies with large sums of capital had the potential of employing expensive technological tools to gain the competitive advantage: small business had less potential because they could not afford expensive manufacturing or processing technology tools. However, advancement in technology has created a new economic environment which depends on information, and that is what we call the "INFORMATION AGE". The information age provides a different work environment, and this has helped small businesses gain position in highly competitive markets.
