FULL NAME: _____

Phylum: Arthropoda

Describing Arthropods

Animals in this phylum (group) do not have a backbone.

Animals in this phylum (group) have more than 1 cell.

They molt this covering in order to grow bigger.

This protects them and helps them for movement.

These are structures like arms and legs for movement.

Answer Bank

Exoskeleton

thorax

Hard outer covering

head

Jointed appendages

abdomen

Multicellular

Invertebrates
