

# FOOD WASTE

## LISTENING

### LISTENING FOR SPECIFIC INFORMATION

Listen to the conversation between two people about food and answer the following question.

- 1 What is the first speaker eating?

---

- 2 Who did the first speaker travel through China with?

---

- 3 Does the first speaker order food?

---

## COMPLETING NOTES

Listen again and complete the notes.

Roughly \_\_\_\_\_ of all the food produced for consumption is thrown away every year. This is \_\_\_\_\_ dollars' worth of food, which could feed \_\_\_\_\_ . It is the equivalent of the entire country of China, which is \_\_\_\_\_ acres, being used to grow food which is then thrown away. In addition, the water required to grow this much food is equal to \_\_\_\_\_ people using \_\_\_\_\_ , per person, per day. There will not be this many people on the planet until around 2050, by which time we will need to have increased food production by \_\_\_\_\_ . Currently, around 700 million people go hungry. A lot of the waste is caused by high supermarket standards for appearance. For example, around \_\_\_\_\_ of European fish is discarded for this reason.
