READING

A-Susan takes care the Earth. She is reading an article about Global threats. After reading, answer the following questions (5x3=15)

Global threats

Feeding the planet – are living buildings the answer?

There are 7 billion people in the world today, and in 2050 there will probably be 9 billion or more. This overpopulation is going to create serious problems. How will we produce enough food for everyone? There isn't enough land in the world to grow all this food, so we need to change the way we produce it. One solution is to grow food in cities. Some architects want to create "living buildings" where people can live and also grow food.

One project for a "living tower" shows a fifteen-floor building with stores at the bottom, and apartments and offices on the higher floors. On every floor, there will also be a "field", which will grow fresh food such as tomatoes and strawberries. Residents will pick their own food. It won't be necessary to transport it long distances, so this will save energy.

Architect Jason Goldsmith explains the project. "There will be electronic temperature control for the plants," he says. "We'll recycle water from the apartments and reuse it to water them. By growing plants in towers, we will need fewer farms in the countryside. This will help reduce pollution on our land and in rivers. I believe that living buildings will help protect the environment."

For an extra 2 billion people, we need to grow a lot more food, so we need to consider all the possible solutions.

One option is to change our eating habits. More people are becoming vegetarians or eating organic food to save energy. Another option is to develop new farming technology. Scientists are creating new plants that can survive droughts or floods. It is also essential to reduce the amount of food we throw away.

Living buildings will not solve the food problem, but they will probably be one of a number of different solutions.
