Topic: Food Chain, Habitats and Metamorphosis

Intructions: Copie en su cuaderno lo siguiente. Puede ilustrar opcional.

Foodchain

It is the succession of animals and plants that feed off each other .

Habitat

Animals live in places called habitats which provide the proper conditions to live .

Types of animals according to their habitat

Aquatic

Terrestrial

Types of animals according to the food they eat:

Carnivores

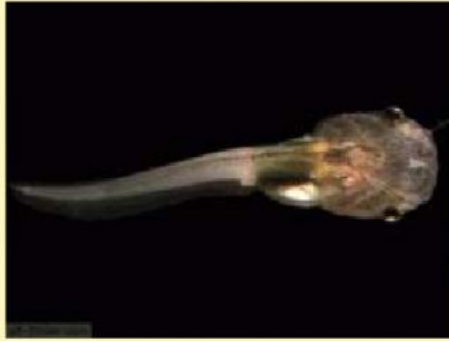

Herbivores

Omnivores

Change During Life

Metamorphosis is the change in form and size which some animals experience before reaching maturity .

Metamorphosis of a frog

1. The frog lays its eggs .

2. A tadpole is born . It breathes underwater .

3. Legs grow from its body .

4. It loses its tail and breathes out of water using lungs .
