

ASSESSMENT FORMATIVE 1

Learning Objectives : Understanding and measuring temperature
magnitudes using various thermometer scales

☐ Please watch the following video

☐ Text Field

Name :

Class :

☐ Check Boxes

The boiling point of pure water is 100 °C

The Freezing point of water is at 32°F

The Melting point of pure water is 100 °R

The melting point of pure ice is 100 °C

The boiling point of water is 212°R

☐ Select

1. A liquid's temperature was measured using a Celsius thermometer, and it was recorded as 40°C. What would be the temperature of the liquid if measured using a Reamur thermometer?

35°R

32°R

31°R

30°R

2. The temperature of an object measured with a Celsius thermometer shows a scale of 45°C. What is the temperature value of the object when measured with a Fahrenheit thermometer?

113°F

112 °F

111 °F

110 °F

Shift the numbers in the following question correctly

113 °F = °C

45 °C

45 °F

40 °C = °F

104°F

104°C

Text Field

A thermometer X can measure the temperature of melting ice at -5X and boiling water at 120X. If an object has a temperature of 24°C, the thermometer X will indicate a scale of
(Create the solution, make it known, ask, and answer it)
