

Reading circle

Read the paragraph then answer the following questions:

Paragraph (2)

2 The main cause of global warming is the increase in greenhouse gases in the atmosphere. Greenhouse gases, for instance, carbon dioxide (CO₂) and methane (CH₄), are actually produced naturally, and they play a crucial role in making the Earth's climate liveable by trapping heat. However, human activities are significantly increasing the amount of these gases in our atmosphere. One such activity is the burning of fossil fuels to create electricity and power our cars. Other activities include farming, mining, the production of goods and services and the burning or clearing of forests.

1-What is the main cause (reason) of global warming?

2-How did the writer explain these reasons?

3-Did the writer use linking words? Mention them.
