Grace and Frankie S1 Ep 5

goals

edible, taking you two for, hash out, look past, good at, overheard , tend to, in the first place, want to worry about, triple, rule out, start all over

Read the conversations. Make your own sentences with the words in bold.

Emma: "It's microwave dinner at 7.»

John: "Well, it's an **edible** suicide note."

Sarah: "an edible suicide note'? That's pretty dramatic. Are you sure it's that bad?"

Emma: "Haha, I might have exaggerated a bit, but you get the idea. It's just one of those meals that makes you question your life choices."

John: "Exactly, it's not the end of the world. We're just too lazy to cook today."

Sarah: "Fair enough. Maybe next time, we can all **go for** frozen yogurt, and that'll be our culinary adventure."

edible

go for

Read the conversation. Guess which line quotes on Frankie (F) and which on Grace (G) .

: "You're **good at** this. You should work here."

: "The short answer is yes, the long answer I'll **hash out** when I write a strongly-worded letter to myself."

: "I'll tell you what I'm doing **great at** is keeping my hands off your throat."

Brianna: "If you look past the icy exterior, and the layers of walls, there's actually an amazing woman in there. Still terrifying."

: "I'm just like you but with a better personality."

: "Two more hallways, I'll give you a face massage."

: "Three more hallways and you'll let me have the beach house."

Read the three article. Complete the sentences with your own ideas

The Dynamics of Communication in Group Isolation Studies

In the field of psychological research, the study of group isolation and its impact on interpersonal dynamics has long been a subject of interest. The complex web of communication, cooperation, and interpersonal relations in isolation experiments is a fascinating arena to explore human behavior. This article delves into one particular case, revealing unexpected insights into the intricate fabric of group dynamics.

During a recent isolation experiment, participants were subjected to prolonged periods of confinement. One key aspect of the experiment was communication, which was observed to be essential for maintaining mental well-being. In this environment, the phrase **"What I'm hearing is stay where you are with the doors closed"** took on significant importance. It served as a reminder to participants to remain in their designated spaces, reinforcing safety protocols.

As the days turned into weeks, participants observed each other's behaviors and communicated through limited means. In such an environment, the phrase **"Was she okay, I don't know, she's not exactly a big sharer"** became relevant. Participants noted variations in behavior but found it challenging to interpret their colleagues' emotional states. This highlighted the significance of transparent and open communication in isolated environments.

The phrase **"I said something the other day and she may have overheard, but I'm not sure"** shed light on the consequences of miscommunication within isolated groups. Misunderstandings and unintended impacts on fellow participants emphasized the need for clarity and precision in communication.

One participant's question, **"How do you know all that? I tend to notice a person when I live with her,"** highlighted the unique ability of individuals to observe and internalize behaviors during isolation. This observation was a testament to human adaptability in perceiving social cues even in challenging circumstances.

In the realm of helping and support, the phrase **"Helping would be not calling Dr. Maison. Or not getting high and dragging me to frozen yogurt in the first place"** underscored the importance of providing assistance thoughtfully and without exacerbating stress levels.

One participant expressed a desire for appreciation by asking, **"Why can't you appreciate me?"** This revealed the fundamental human need for recognition, even in challenging conditions. The response, **"I appreciate you. Like it or not, you're my friend,"** reaffirmed the significance of friendship and camaraderie during periods of isolation.

In conclusion, isolation experiments continue to provide valuable insights into human behavior, interpersonal dynamics, and the importance of effective communication. These experiments emphasize the need for clear, open, and empathetic communication as a vital component of maintaining mental well-being in isolated environments. Furthermore, they highlight the enduring human capacity for connection and support, even in challenging circumstances.

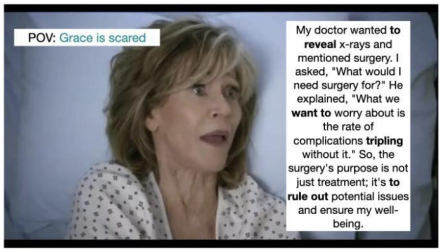

She may have overheard

He tends to notice

in the first place

Like it or not,

Read the text, make sure you understand the words in bold.

We use it for messengers and social media videos:
POV - Point Of View
