Activity 2.1.13

Complete the table below by converting these images into binary data -

Statement	True / False
JPEG files can be compressed using lossy compression because some loss of image quality is acceptable	
Viewing a compressed video file involves less processing than viewing an uncompressed one.	
A GIF file and a JPEG file are both bitmap image formats that use lossy compression.	
An MP3 file is used to store music and voice data and uses lossy compression so that the original quality is not fully preserved.
