

c. Bài tập thực hành

Exercise 1:

The man who tried to destroy Paris

Le Corbusier was one of the most influential architects of the 20th century. But many may wish he had never built anything

Born Charles-Edouard Jeanneret in Switzerland in 1887, the architect Le Corbusier used his grandfather's name when he went to Paris at the age of 29. As Jeanneret, he had been a fairly successful small-town architect; as Le Corbusier, he had bigger ideas. He disliked the architectural styles that were popular at the time, and considered them to be out of date in an industrial age. He believed that the 20th century deserved a brand-new style of architecture. "We must start again from zero," he said.

The new style of architecture was called the International Style, and it attracted many followers in the architectural world. However, nobody was as enthusiastic about it as Le Corbusier at the beginning. He worked hard to promote his ideas at exhibitions, at talks, in books and in his own magazine. He loved machines, and believed that, like a machine, a building should have a function. He is famous for saying: "A house is a machine for living in."

The machines he admired the most were ships, and his early buildings tried to capture the spirit of the sea with their white walls, exposed rooms, shining glass and flat roofs. He called this style of architecture 'purism'. The first building to embrace this style was the Villa Savoye in France. Le Corbusier believed that it was one of the best, most functional houses ever built. Unfortunately, this turned out to be an exaggeration. The flat roof was a particular problem, as water poured in every time it rained, and it needed constant repairs. Nevertheless, its design was revolutionary, and it should be considered a significant piece of early 20th-century architecture.

In 1935, Le Corbusier visited New York City. He loved the city, and especially its tall buildings. He had only one reservation, which he explained to a journalist for the Herald Tribune newspaper. American skyscrapers were the biggest, tallest buildings in the world at that time, but Le Corbusier was a man who always thought big, and as far as he was concerned, they were "just too small". Le Corbusier had always admired tall buildings. Now, inspired by his visit, he abandoned purism. It is doubtful that he could have created anything as grand as the skyscrapers he had seen in the city, but from now on Le Corbusier started designing buildings that sent out a more powerful message.

He first started using bright colours, and then experimented with concrete. Le Corbusier loved the look and flexibility of concrete, and found it hard to hide it behind brick or paint, preferring to leave it on full view. At a time when concrete was seen as modern and exciting, his designs made him world famous, and he was asked to design several important buildings around the world. Altogether, he designed about 60 major buildings worldwide, in a style that became known as 'modernism'.

However, while many admired and copied his new style of architecture, many more hated it. They turned against him, and tried to block his plans. Buildings should inspire people and make them feel good, they said, and Le Corbusier's ugly, depressing buildings often had the opposite effect. In this respect, the people of Paris had a lucky escape. Early in his career, Le Corbusier had wanted to knock down the centre of Paris and replace the old buildings with huge towers. Fortunately, his plan was rejected. Justifiably, in view of his plans to transform one of the world's most beautiful cities into a hideous concrete jungle, Le Corbusier is still known as 'the man who tried to destroy Paris'.

Despite the criticism, he had an enormous effect on the world of architecture, and attracted a large number of followers. As a result, many places were subjected to his style. In the Paris suburbs of Bobigny, for example, huge towers were built to house some of the city's poorer inhabitants. Other European cities such as London, Berlin and Dublin also felt his influence. Apart from the buildings that were directly influenced by Le Corbusier, something else happened that the architect never planned: there was a return to older styles of architecture. Today, many people live in modern houses that look like they are much older. This look may represent a return to traditional tastes and values. More likely, however, it represents a reaction against modernist architecture.

Questions 5-8:

Complete each sentence with the correct ending, A-F below

- | | |
|---------------------------------------------------|---------------------------------------------------|
| 5. Le Corbusier's Villa Savoye | A. copied the style that he had invented |
| 6. The concrete in Le Corbusier's later buildings | B. is a classic example of modernist architecture |
| 7. Le Corbusier's style of architecture | C. made him friends and enemies |
| 8. Le Corbusier had a large following which | D. was not as good as he claimed |
| | E. was covered in bright colours |
| | F. was left exposed so that people could see it |
