The \_\_\_\_\_ is the introduction in the atmosphere of substances or \_\_\_\_\_ that can be \_\_\_\_\_ for \_\_\_\_\_ and the environment.

These substances can be \_\_\_\_\_, such as ashes from volcanoes, pollen, or dust from deserts, or artificial.

Artificial pollutants are classified in:

- \_\_\_\_\_ pollutants, such as noise, \_\_\_\_\_ or radioactivity and
- Chemical pollutants, produced by \_\_\_\_\_, \_\_\_\_\_ and livestock, such as:
  - ▲ methane from \_\_\_\_\_ and carbon dioxide, from fossil \_\_\_\_\_ burnings, that produce the increase of the greenhouse effect and the \_\_\_\_\_,
  - ▲ carbon monoxide, produced by vehicles and machinery that produce \_\_\_\_\_, and
  - ▲ nitrogen and sulphur oxides, responsible for the \_\_\_\_\_.
