In China, it is believed that tai chi can delay ageing and prolong life, increase flexibility, strengthen muscles and tendons, and aid in the treatment of heart disease, high blood (1)____, arthritis, skin diseases, depression, cancer, and many other (2)_____.

(3) ____ of the research on tai chi has been done in older individuals in the area of balance and fall prevention. This area of (4) ____ is important because fall-related injuries are the leading cause of death from injury and disability among older adults. Because tai chi movements are slow and deliberate (5) ____ shifts of body weight from one leg to the other in (6)____ with upper body movements, it challenges balance and many have long assumed it helps improve balance and reduce fall frequency.

In a similar tai chi study of older adults, 54% of the subjects who practiced tai chi attributed their improved (7) ____ of confidence to improved balance. One study looked at adults in their 60s and 70s who practiced tai chi three times a week for 12 weeks (60-minute classes). After (8) ____ six weeks, statistically significant improvements were observed in balance, muscular strength, endurance, and flexibility measures. Improvements in each of these areas increased (9) ____ after another 12 weeks.

The demands of living are stressful for adults of all ages. Although one cannot directly point to studies showing a reduction in stress from practicing tai chi, the breathing, movement, and mental concentration required of individuals who practice tai chi may be just the distraction you need from your hectic (10)_____.
