

* Calcula el valor de las siguientes potencias :

$$a) \quad 2^{-4} = \frac{\square}{\square^{\square}} = \frac{\square}{\square}$$

$$b) \quad -3^{-3} = \frac{\square}{\square^{\square}} = \frac{\square}{\square}$$

$$c) \quad (-5)^{-3} = \frac{\square}{\square^{\square}} = \frac{\square}{\square}$$

$$d) \quad \left(-\frac{3}{2}\right)^{-3} = \left(\frac{\square}{\square}\right)^{\square} = \frac{\square}{\square}$$

$$e) \quad \left(-\frac{1}{2}\right)^{-2} = \left(\frac{\square}{\square}\right)^{\square} = \frac{\square}{\square}$$

$$f) \quad \left(-\frac{5}{2}\right)^{-2} = \left(\frac{\square}{\square}\right)^{\square} = \frac{\square}{\square}$$
